PROFESSIONAL SUMMARY

Senior software engineer with 8+ years of experience building enterprise applications on C#/.NET and Azure, including 2 years of focused experience in Generative AI and agentic systems. Hands-on in designing secure RAG pipelines, multi-LLM orchestration, and workflow automation using LangChain, LangGraph, Pinecone, Azure AI Foundry, Azure AI Search, and Microsoft Copilot Studio. Strong background in delivering scalable, compliance-aware solutions that connect enterprise systems with modern AI capabilities.

CORE SKILLS

Generative AI & LLMs: Python, LLMs, Generative AI, LangChain, LangGraph, NLP, MLOps, Scikit-learn, Pandas, NumPy, Tavily

Cloud & Backend: Azure AI Foundry, Azure AI Search, Azure Functions, Azure Cosmos DB, .NET Core, ASP.NET Core, MVC, FastAPI

Security & Delivery: Microsoft Entra ID (SSO), PII redaction, Guardrails, prompt protection, Git, LiteLLM, LangFuse

PROFESSIONAL EXPERIENCE

Coforge Ltd | Oct 2021 - Present

- Full-stack development solutions using Python, LangGraph, LangChain, Azure AI Foundry, Pinecone, FastAPI, PgVector, JavaScript and jQuery.
- Designed cloud-native applications on Microsoft Azure with Azure App Service, Azure Functions, Azure Active Directory, Blob Storage, Cosmos DB, and serverless patterns.
- Built enterprise AI solutions for insurance workflows, document intelligence, claims enrichment, and conversational assistance.

Helm Analytics Pvt. Ltd. | Jan 2020 - Sep 2021

- Contributed as full stack developer to enterprise web application development and backend services with a focus on scalable delivery and application reliability with ASP.NET Core, MVC, Angular, RESTful Web APIs, JavaScript and jQuery.
- Supported requirements analysis, technical design, and implementation for business applications delivered in client-facing environments.

Chetu India Pvt. Ltd. | Feb 2019 - Jan 2020

- Developed and maintained application features across the software lifecycle, with emphasis on clean implementation and production support.
- Worked on RESTful APIs and web application components for enterprise use cases.

Wildnet Technologies Pvt. Ltd. | Jan 2017 - Feb 2019

- Built web application features and backend components using Microsoft technology stacks.
- Supported project delivery through coding, testing, debugging, and issue resolution.

GENERATIVE AI PROJECTS

Insurance GPT - Enterprise AI Document Intelligence Platform

- Designed and developed a secure enterprise AI assistant for insurance document querying and conversational support.
- Built a RAG pipeline with OCR ingestion, embeddings, semantic retrieval, Tavily web search, and PostgreSQL pgvector for context-aware answers.
- Integrated Azure AI Foundry Guardrails and safety controls with local and self-hosted LLMs to support responsible AI behavior and prompt protection.
- Implemented Microsoft Entra ID SSO, PII redaction, and compliance workflows to keep AI interactions secure and privacy-aware.

- Enabled multi-LLM orchestration through LiteLLM with OpenAI, Azure AI Foundry, and self-hosted models.
- Supported PDF, Word, and Excel based document ingestion.

AI-Driven Weather Hazard Intelligence Platform

- Built a RAG-based generative AI solution to predict location-specific weather hazards and enrich insurance FNOL and claims workflows.
- Developed LangChain agents with custom tools for weather data, policy context, and claims enrichment, orchestrated through LangGraph.
- Integrated Azure OpenAI, Azure Functions, Blob Storage, and Cognitive Search vector search for a scalable serverless deployment.
- Enabled proactive alerts, context-aware conversations, and risk-based recommendations with secure Azure AD and managed identity access.

AI Insurance Chatbot

- Architected and developed a production-ready AI Insurance Chatbot leveraging Azure OpenAI, LangChain, LangGraph, Pinecone, and Azure AI Foundry.
- Implemented a RAG architecture using vector embeddings, Pinecone, and semantic retrieval for accurate policy and claims assistance.
- Built agentic workflows for policy search, claim status tracking, document analysis, and knowledge retrieval through custom tools.
- Designed scalable backend services using Python, FastAPI, Azure Functions, and Azure cloud-native services.
- Delivered context-aware conversational experiences that improved operational efficiency and accelerated customer support workflows.

CERTIFICATIONS

- Microsoft Certified: Azure Developer Associate (AZ-204)
- Microsoft Certified: Azure Fundamentals (AZ-900)
