SKILLS

- Python
- GEN AI
- LLM
- LangChain
- LangGraph
- Azure AI Foundry
- Azure AI Search,
- Azure Functions
- Azure Cosmos DB
- MLOPS
- Scikit-learn
- Pandas
- Numpy
- Artificial Intelligence
- NLP
- GIT

CERTIFICATIONS:

1. Azure Developer Associate (AZ-204)
2. Azure Fundamentals(AZ-900)

Generative AI Engineer & Senior Software Engineer 8+ years of software engineering experience, combining a strong foundation in **C#/.NET and Azure** with **1.5+ years** of specialized expertise in Generative AI and Agentic Systems. Proven track record of leveraging deep backend knowledge to architect scalable **RAG pipelines** and autonomous agents using **LangChain, Pinecone Vector Database, Microsoft Copilot Studio, and Azure AI Foundry**. Expert in bridging the gap between traditional enterprise architecture and next-generation AI, delivering high-value solutions.

Professional Experience in Detail

GENAI Projects

AI-Driven Weather Hazard Intelligence Platform

- Built a RAG-based GenAI system to predict location-specific weather hazards and enrich insurance FNOL and claims workflows.
- Developed LangChain agents with custom tools for weather data, policy context, and claims enrichment, orchestrated using LangGraph for stateful multi-step workflows.
- Integrated Azure OpenAI, Azure Functions, Blob Storage, and Cognitive Search (Vector Search) for scalable, serverless GenAI deployment.
- Enabled context-aware conversations, proactive alerts, and risk-based add-on recommendations with secure access using Azure AD and Managed Identity.

AI Insurance Assistant with LangChain Agents

- Developed an **intelligent insurance assistant** using LangChain agents and custom tools for policy queries, claim status lookup, and document tracking.
- Automated **multi-step workflows**, integrating database queries, email generation, and compliance checks to streamline insurance operations.

Enabled **context-aware, multi-turn conversations with memory retention** to handle complex insurance scenarios

Doc Intelligent Q&A System

- Designed and implemented a **Retrieval-Augmented Generation (RAG)** pipeline using LangChain and vector databases for semantic document search.
- Integrated **LLMs** to generate context-aware, accurate answers from enterprise documents.
- Built an **end-to-end** solution covering ingestion, chunking, embedding, retrieval, and answer synthesis, improving knowledge accessibility and reducing manual search time.

PDF Data Extraction with Azure Foundry

- Built a pipeline in **Azure Foundry** to extract structured data (text, images, and tables) from PDF files and convert them into **JSON format** using cognitive services and Foundry's workflow tools.
- Automated manual data entry for reports, reducing processing time by and improving data accuracy for downstream analytics.

CUSTOM SECTION:

LinkedIn Profile: https://www.linkedin.com/in/shivam-mishra-92199892

Automated Data Extraction Pipeline

- Built a **data extraction and transformation pipeline** using Azure Foundry & Microsoft Copilot Studio to ingest semi-structured data (CSV/JSON) from cloud storage.
- Implemented automated cleansing and transformation rules before loading into a Snowflake warehouse for downstream analytics.
- Improved data processing efficiency, reducing manual intervention and enabling faster insights.

Backend .NET Experience – Cloud Solutions, API Development

- Spearheaded full-stack development across Legal, E-commerce, and Healthcare domains, designing scalable architectures using ASP.NET Core, MVC, and Angular.
- Implemented robust cloud-native solutions on Microsoft Azure, utilizing Azure App Services, Azure Functions, and Azure Active Directory to ensure secure and scalable application deployment.
- Developed and consumed RESTful WebAPIs to support mobile and web clients, while integrating real-time communication features using SignalR (WebSockets) for live tracking and correspondence systems.
- Conducted in-depth project analysis and requirement gathering, creating technical specifications and high-level designs for compliance-driven e-commerce and inventory management platforms.
- Optimized front-end interactions using JavaScript and jQuery within Visual Studio environments, delivering responsive solutions for both Web applications.

Work Experience

- Coforge ltd (Oct 2021 - Current)
- Helm Analytics Pvt. Ltd. (Jan-2020 – Sep 2021)
- Chetu India Pvt. Ltd. (Feb 2019 - Jan 2020)
- Wildnet Technologies Pvt. Ltd. (Jan 2017 - Feb 2019)
